PROFILE

Front End Developer with experience in personal and professional work. I have two years of professional experience in freelance work from landing pages to MFE's, currently specializing in React, NextJs, Node, MongoDB and Docker. I also work as Fullstack since my professional work demanded it and I could quickly develop and resolve those issues. I also have experience with PHP, MySQL, Laravel and some knowledge in Java and Python. I know work methodologies since I count in certain projects like the MFE with the integration of a group which is individualized each one in its own area.
